Discrete Mathematics
Volume 169, Numbers 1–3, 15 May 1997

Contents

Contributions

M.-C. Cai
Connected [k, $k+1$]-factors of graphs 1

G.F. Clements
The cubical poset is additive 17

K.L. Collins and L.B. Krompart
The number of Hamiltonian paths in a rectangular grid 29

F.M. Dong and K.M. Koh
On graphs in which any pair of colour classes but one induces a tree 39

T. Etzion
Optimal constant weight codes over Z_k and generalized designs 55

J.W. Grossman
Dominating sets whose closed stars form spanning trees 83

V.P. Korzhik
A tighter bounding interval for the 1-chromatic number of a surface 95

D. Kuo, G.J. Chang and Y.H.H. Kwong
Cordial labeling of mK_n 121

X. Liu
Lower bounds of length of longest cycles in graphs involving neighborhood unions 133

S. Sevast'janov and W. Banaszczyk
To the Steinitz lemma in coordinate form 145

Communication

A.E. Brouwer and H.M. Mulder
The vertex connectivity of a $\{0, 2\}$-graph equals its degree 153

Notes

A. Abrams
The kth upper chromatic number of the line 157

D. Banković
General reproductive solutions of Postian equations 163

C. Berge and J.-L. Fouquet
On the optimal transversals of the odd cycles 169

O.V. Borodin
A new proof of Grünbaum's 3 color theorem 177

I.G. Boukliev
New bounds for the minimum length of quaternary linear codes of dimension five 185

G. Brinkmann and E. Steffen
3- and 4-critical graphs of small even order 193

R.A. Brualdi and J.A. Dias da Silva
A retract characterization of posets with the fixed-point property 199

K. Cameron
Coloured matchings in bipartite graphs 205

B. Chen
Parametric Möbius inversion formulas 211

D. de Caen
A lower bound on the probability of a union 217

H. Galeana-Sánchez
A characterization of normal fraternally orientable perfect graphs 221

X. Gourdon and H. Prodinger
A generating function approach to random subgraphs of the n-cycle 227

J.R. Griggs and Y.-C. Lin
The maximum sum of degrees above a threshold in planar graphs 233

V. Gurvich and L. Khachiyan
On the frequency of the most frequently occurring variable in dual monotone DNFs 245

X. Liu and B. Wei
A generalization of Bondy's and Fan's sufficient conditions for Hamiltonian graphs 249

A.J. Macula
Two applications of separating systems to nonadaptive procedures 257

K. Ono
Odd values of the partition function 263

S. Riis
Bootstrapping the primitive recursive functions by only 27 colors 269

L. Stacho
A sufficient condition guaranteeing large cycles in graphs 273

X. Tang and A. Ben-Israel
Two consequences of Minkowski's 2^n theorem 279

I. Tomescu
On the number of trees having k edges in common with a graph of bounded degrees 283

B.S. Webb
Orbits of infinite block designs 287

X.-R. Yong, Talip and Acenjian
The numbers of spanning trees of the cubic cycle C_N^3 and the quadruple cycle C_N^3 293
